

GOLDGLASS TECHNOLOGIES

Changing the face of glass

A GOLDEN FUTURE...

TURNING GLASS INTO GOLD

Historically, glass was first made right here, in the Near East. There was always a lot of sand around, and bright minds were not in short supply either. So it is no wonder that up till today, the most innovative ideas about glass processing sprout in the same area where ancient alchemists first discovered the marvel of turning sand into glass.

We, alchemists of the modern age, aim at further turning this glass into gold – in a way of creating the most advanced and efficient glass finishing machines, that will save you heaps of time and money without making any compromises on the issue of quality. The new win-win in glass finishing is Goldglass.

WHO ARE WE? THE NEW ALCHEMISTS

Just like the machines we build, we are relatively small in size but great in innovation, productivity and efficiency. Our company has risen from an almost anonymous family venture to a worldwide success, with sales of millions in just four years since the debut of our first painting machine, the M.R.C 2150.

Zami Goldstein, the founder of Goldglass, is an inspiring entrepreneur and a brilliant inventor and machine builder. But first and foremost, his story is a story of love for glass and glass products. Coming from the sphere of electric machinery and automation services, Zami first encountered the world of glass at the end of the 1990's. His first machines were built for special orders received in his glass art studio, and from there – using his accumulated rich experience in the realm of glass finishing - it was a short way to the development of industrial mechanics. Goldglass is his dream come true: a proven working solution for turning a once complex, expensive and unwieldy routine into a clean, easy to use, affordable and economical process.

M.R.C-2350-CI/2850 Glass Painting Machine

A revolutionary glass painting machine

"THE GOLDEN EGGS" – OUR PRODUCTS

Goldglass is currently offering two state-of-the-art machines that accommodate almost every need in the glass finishing industry. Our clients vary - from large factories to mid-range producers and small studios, from mass-production units to private projects. Our unique features and flexible design enable us to cater them all.

Our golden flagship is M.R.C-2350-CI: a revolutionary painting machine that is literally changing the world of glass finishing - it is definitely the most advanced, economic and efficient product in the market today. This is what we mean by changing the face of glass.

WHAT MAKES THIS GOLD BRIGHTER THAN OTHERS?

- A single color gun guarantees uniform color and prevents uneven coverage.
- Glass detecting system ensures edge-to-edge painting - no color is wasted!
- Automatic cleaning optimizes performance and protects your workers from exposure to hazardous materials.
- Easy installation and maintenance save you time and money.
- Low energy consumption saves you more money. And the environment will thank you too.
- Dimensions and mobility: this compact machine can be fitted wherever you want it to be, and easily mobilized according to your needs.
- High production rate.

The result is an unbelievably shorter ROI, the best you can get in the glass finishing business to-date. **The youngest member in our golden family is the new GD-7000.** This advanced glass paint drying machine is fully interfaced with the M.R.C-2350-CI, but can be purchased as a stand-alone as well. Just like its older sister, it is characterized by simple operation, economic energy consumption and high efficiency. Drying times are shorter than ever.

GD7000 Glass Dryer

Economic energy consumption and high efficiency.

A GOLDEN FUTURE ...

The bright minds at Goldglass keep endlessly busy with fulfilling Zami's vision to the best. Our goal is to make the finest finishing machines in the world, by way of always thinking out of the box and formulating unique finishing solutions. This means new products, advanced models, improved functions, impeccable service and every little detail that would make glass finishing smooth, user friendly, eco-friendly and budget friendly!

If it is now almost impossible for anyone to imagine a world without glass, the day is near when glass producers and consumers will find it extremely difficult to imagine a world without Goldglass.
